# OdorCap® 5700

## General Industry

Protects your community by controlling sulfur-based odors

Objectionable odors from industrial and municipal wastewater treatment facilities are on the list of concerns of local communities and commercial centers. Many of these odors are sulfur-based, such as hydrogen sulfide ( $H_2S$ ) and mercaptans. They are detectable at extremely low concentrations and frequently caused by nuisance bacteria that grow in anaerobic environments. Sulfur-based odors, like many of the issues around wastewater treatment plants, are biological problems that can often be solved with biological solutions.

## OdorCap® 5700: Patented Biological Solution for Controlling Sulfur-Based Odors Like $H_2S$

OdorCap 5700 contains patented biological odor control technology and can degrade hydrogen sulfide, mercaptans, and volatile fatty acids. A biological odor control program using OdorCap 5700 offers superior odor prevention, working in the same environments where odors are generated. Furthermore, it will not negatively impact the biological treatment system and is a sustainable, environmentally safe and non-chemical solution.

## The Benefits of Using OdorCap 5700

### Lower operating costs

- Reduces spending on odor control program

### Improved plant efficiency

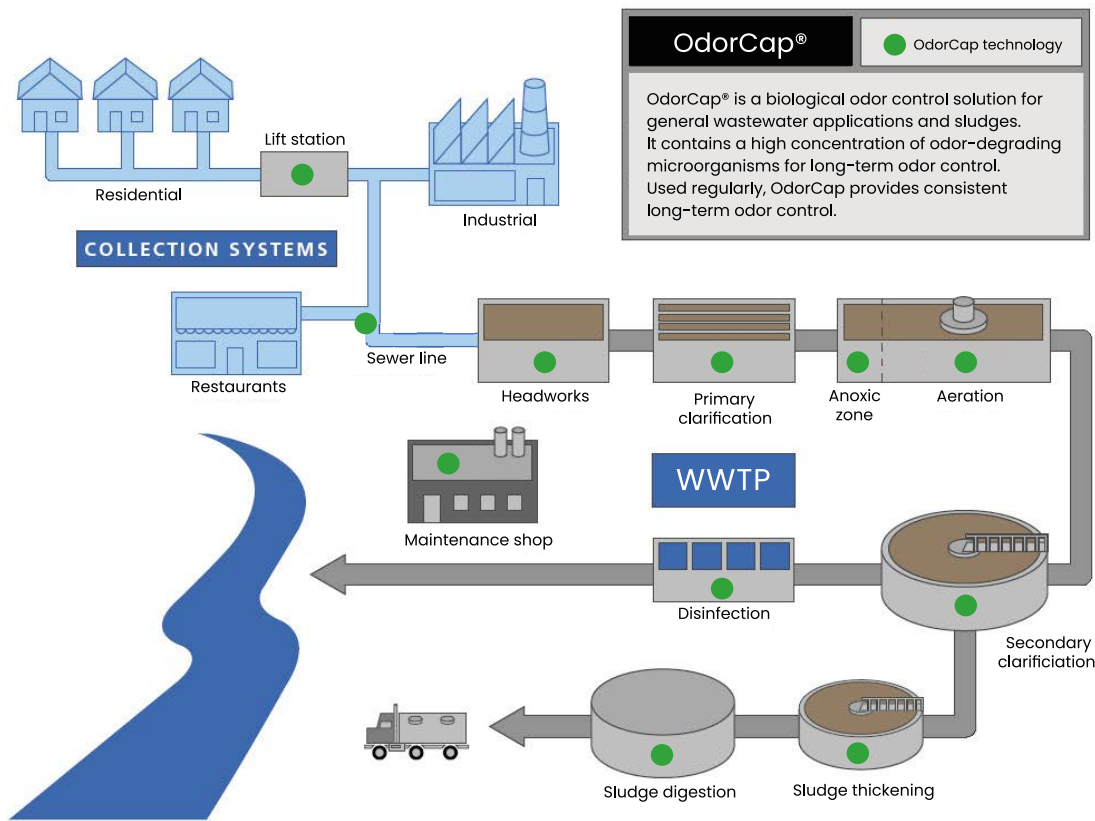

- Increases degradation of hydrogen sulfide and mercaptans
- Increases degradation of volatile fatty acids

### Simplified operations

- Works within the existing plant infrastructure

## Micro Solutions. Major Impact.

Clean water is essential for healthy people and a healthy planet. EnviroZyme’s microbial solutions use bioaugmentation to naturally and efficiently treat water before it’s returned back into the system. Our team of experts have come together to create environmentally-focused microbial solutions and technical services to support water resource recovery facilities in their global quest to provide clean water.

## Billions of microorganisms at your service.
