OdorCap® 5115

General Industry

Protects your community by controlling wastewater and sludge odors

As communities expand, businesses and homes are located closer to wastewater treatment facilities, making odor control increasingly important. Wastewater treatment naturally has odors associated with it, and plant operators must be diligent in order to maintain odor control and minimize public disturbances. Most wastewater odors, like many of the issues around wastewater treatment plants, are often best solved with biological solutions.

OdorCap® 5115: Broad-Based Biological Formulation Controls Wide Range of Wastewater Odors

OdorCap 5115 is a non-hazardous biological odor control solution for general wastewater applications and sludge handling operations. It contains a high concentration of odor-degrading microorganisms for long-term odor prevention, plus fragrance for immediate relief, and can be diluted for smaller systems. When used regularly, OdorCap® 5115 provides consistent and long-term odor control.

The Benefits of Using OdorCap 5115

Lower operating costs

- Solves root cause of odors, reducing odor control program expenses

Improved plant efficiency

- Improves odor around sludge-handling operations
- Provides long-term odor control for various points in the wastewater system

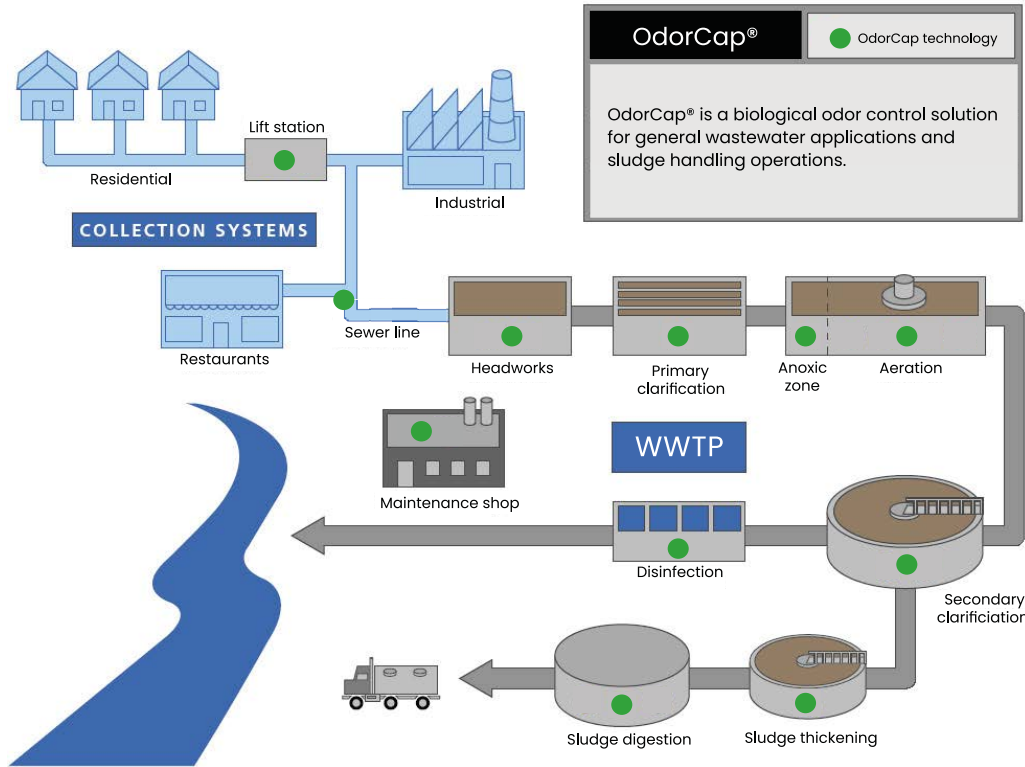

Simplified operations

- Reduces odor emissions
- Works within the existing plant infrastructure
- Streamlines application as a ready-to-use liquid
- Provides flexibility in dosing manually or by pump

Application Points for OdorCap 5115

Micro Solutions. Major Impact.

Clean water is essential for healthy people and a healthy planet. EnviroZyme’s microbial solutions use bioaugmentation to naturally and efficiently treat water before it’s returned back into the system. Our team of experts have come together to create environmentally-focused microbial solutions and technical services to support water resource recovery facilities in their global quest to provide clean water.

Billions of microorganisms at your service.
